The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Lemke et al 6692272 (Figure 6).

Claims 1, 2, 3, 4 and 6: terminals S5+, S5-, and the G terminals directly below them, and S6+, S6-, and the G terminals directly below them.

Claims 1, 3 and 5: terminals S5+, S5-, and the G terminals directly below them, and S7+, S7-, and the G terminals directly above them.

Claims 1, 7 and 8: terminals S4+, S4-, and the G terminals immediately adjacent either side thereof in the same row.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lemke et al as applied to claims 1-8 above, and further in view of Zhang et al 6736676.

Lemke et al substantially discloses the claimed invention except for the terminals being embedded in a retainer body which is received in a surrounding housing. Zhang

et al discloses retainer bodies 20, 30, 40 having terminals embedded therein, the retainer bodies being received in surrounding housing 10. It thus would have been obvious to form the Lemke et al connector with a housing which receives therein a retainer body having embedded terminals, for ease of manufacture.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lemke et al.

It would have been obvious to connect a plurality of the ground terminals to a common earth line since this would not substantially affect the function of the connector assembly and would simplify manufacture.

The other references cited on Form 892 disclose similar grounded connectors.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary F Paumen whose telephone number is 571-272-2013. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula Bradley can be reached on 571-272-2800, ext. 33. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
